DAILY EMPIRE, THE LITTLE GRAVES, "Only a little grave," they said, "Only a little grave," they said.

I know the coffin was narrow and small, And you would have carried me in an ample pall.

The trundle and its freight of clay, But I know that during those long days, Beneath that little coffin lid.

I know that some things were hid away, The crimson frills and wrappings gay, The little sock and half worn shoe.

The cap, with its plumes and tassels blue, And an empty cruet in its covers spread, As white as the face of the airless dead.

'Tis a little grave, but oh! how bare, The world-wide hopes are buried there! And yet, perchance, in coming years, May some, like her, through blinding tears, How much of light, how much of joy, Is buried up with an empty bier!

The Cost of a Big Ship—The New York Post says: Mr. Bask supplies us with some curious facts about all sorts of things connected with English and French naval affairs.

For instance, we read that the cost of building the Duke of Wellington, a large 4,000 ton screw line of battle ship, and vessels of her class, is \$5,000,000, and that the annual repairs require \$500,000.

It is also stated that the Duke of Wellington contains as much timber as seventy six acres of oak forest would produce in one hundred years, and that the whole British navy consists of more oak than 14,000 acres of forest could grow in the same time.

It is also stated that the Duke of Wellington was made out of a single tree, that since 1852 England has added 15,000 horse power to her navy, for vessels below the rank of frigates, more than France, and that France has, during the same period, added 15,000 to the horse power of engines for her navy.

It is also stated that the Duke of Wellington was made out of a single tree, that since 1852 England has added 15,000 horse power to her navy, for vessels below the rank of frigates, more than France, and that France has, during the same period, added 15,000 to the horse power of engines for her navy.
